

R4i Writer is the most advanced XML Authoring Tool for Technical Writers required to create mission critical content. Write S1000D data modules faster with drag & drop references, automatic hotspots and live document previews.

R4i Writer is optimised for the S1000D data formats and installs “Ready to Write” with schemas and stylesheets for S1000D versions 2.0 to v4.1 included. Fully integrated with the R4i CSDB, writers can now easily create high quality operational and maintainer information for PDF, HTML and IETP delivery.

The fastest and easiest way to create S1000D

R4i Writer® allows authors to work in a native XML authoring environment while accessing content and resources directly from the R4i CSDB Server®.

R4i Writer includes IETP preview and PDF publishing capabilities, eliminating the need for authors to use multiple S1000D tools.

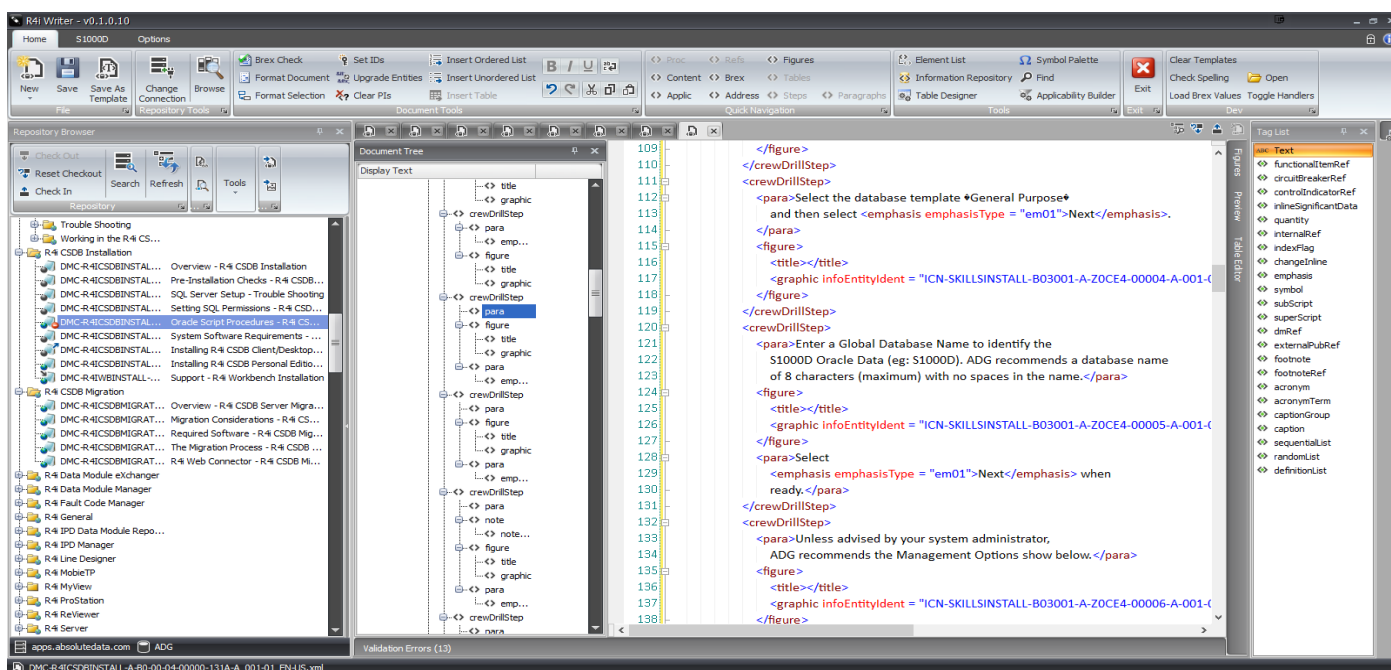

Seamless CSDB Integration

- **No jumping between multiple S1000D products**
Stay inside the R4i Writer XML authoring environment to “drag n drop”, check-in, check-out and reset checked-out Data Modules in the S1000D Common Source Database.

- **Reduce authoring time** by 5 minutes for every:
 - Image insertion,
 - reference to a Data Module, and
 - reference to External Publications

With direct access into the R4i CSDB Server, users can search, browse and preview images, data modules and external publication content, before fast insertion of the reference via the “drag n drop” interface.

- **Zero errors** - The auto-insertion of all the correct ICN, DMC and REFTP element and attribute information ensures authors do not create invalid references.
- **Prevent incorrect applicability filtering blocks being added** - Direct access to the R4i CSDB Server’s Applicability Window, allows ACT Module content to be directly dropped into the Authoring Window, ensuring applicability mark-up is inserted correctly and easily.

R4i Writer

- **Save Authoring time and deliver custom content**
Authors won't have any problem preparing content specifically for each equipment make and model for end-customers, with assignment of ID's (applicRefid) to blocks of content made easy via simple attribute selection.
- **Dynamic update of common parts, spares, consumables and warnings/caution content** -With direct access and insertion of content from CIR (Common Information Repository) and TIR (Technical Information Repository) modules, references are automatically monitored and the latest single source of content is automatically displayed to end-users of the content.
- **Reduce errors** – With the document tree window displaying a documents structure outline, guided editing via the tag insert catalog and smart insertion buttons for commonly inserted element structures, authors won't want to leave this interface!
- **Save Development time** – With the ability to easily switch stylesheets while previewing the current document.
- **Conform to Business Rules** – With built in Brex Validation, authors can check they are writing to the project / contracted business requirements.
- **Perfect Hotspots every time** – With the hotspot selection interface, images with hotspot details are displayed for easy selection and insertion in the authoring window, and saving hours of manually inserting references.
- **Save publishing time** – The R4i Writer IETP Preview window allows the author to see how the Data Module will look when it is published to an Interactive Electronic Technical Publication (IETP).

System Requirements

- Windows 7, 8, 8.1 and 10
- Microsoft .Net 4.0 and above
- Adobe Acrobat Reader
- R4i CSDB Server connection

The screenshot displays the R4i Writer software interface. On the left, a document tree shows the structure of the document with various XML tags. The central workspace shows a technical drawing of a fire extinguisher with five hotspots numbered 1 through 5. Below the drawing, the text reads: "20 LB [9 KG] 'SENTRY' FORAY ABC STORED PRESSURE EXTINGUISHER WITH NORMAL DUTY BRACKET". A table at the bottom right of the workspace lists the hotspots:

| ID | Name |
|------------|------|
| hotspot001 | 3 |
| hotspot002 | 4 |
| hotspot003 | 5 |
| hotspot004 | 2 |
