

## Leverage your technical and operational content with R4i Viewers for Tablets

Mobile IETP's free technicians, operators and crews from desktop PC's and bulky laptops at minimum cost to an organisation.

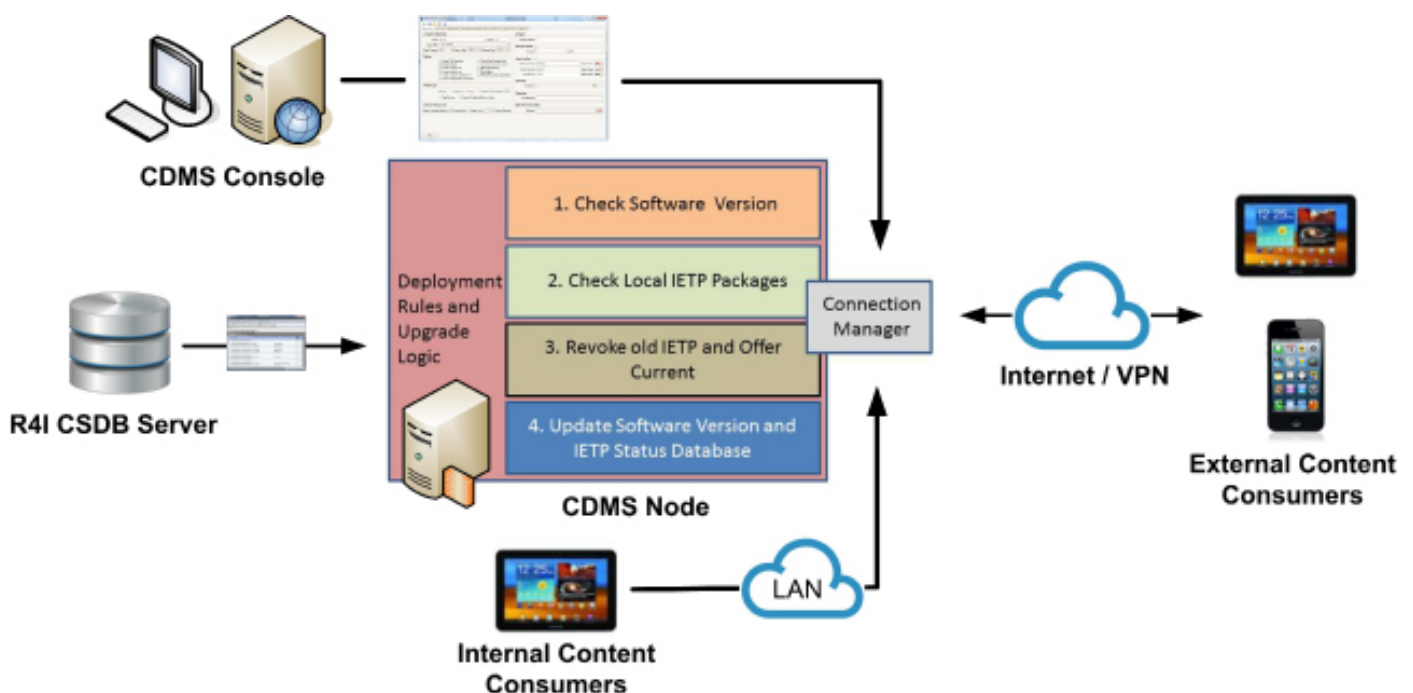

ADG's Mobile IETP Viewers for Android and iPad utilise single source IETP packages generated from the R4i CSDB Server, including support for applicability.

Optimized for small screens and large fingers, the native Mobile IETP Viewers are simple to use and can access content in both online and offline modes.

Included with the R4i MobieTP Viewers is the powerful Content Distribution and Management Server. The Content Distribution Management System (CDMS) is an optional licenced component in the R4i Product suite.

The CDMS resides between the CSDB and the IETP end user and manages IETP software upgrades and IETP Package Downloads.

The CDMS application comprises of a management console, server component and distribution Nodes.

### *The Content Distribution and Management Server (CDMS) provides total control of Mobile IETP Provisioning*

Working in conjunction with the Common Source Database (CSDB), the CDMS enables the content owner to provide the highest possible level of control over distributed content and viewing applications. CDMS features include:

- Distribution of online and offline IETP's
- Automated Mobile IETP Viewer updates
- Delivery of Alerts/Bulletins
- Independent of the App Store and Google Play sites
- Deliver Software Updates

Multiple CDMS Nodes are supported. The use of multiple Nodes prevents Wide Area Networks being saturated as large numbers of maintainers and operators update their IETP's.

The CDMS includes device activity logging and secure access to content. New IETP content can be staged and then published with a single click. The CSDB is integrated with the R4i CSDB Server, enabling R4i Administrators to automatically generate and upload IETP's to the CDMS.

Supported operating systems are Apple iOS 7.0, Android Kit Kat and Android Ice Cream Sandwich. The CDMS requires Windows Internet Information Service 7.0.
